PROFILE SUMMARY

Passionate Full-Stack Developer (Java + React) with hands-on experience building scalable enterprise systems. Skilled in Spring Boot, Express,REST APIs, and ReactJS with Redux. Experienced in integrating third-party APIs, managing databases (MySQL,MSSQL, MongoDB), and deploying via Docker. Committed to clean code, problem-solving, and continuous learning.

SKILLS

Backend

- Java
- Spring boot, Thymeleaf
- Express

Frontend

- JavaScript ,TypeScript
- React
- Bootstrap, Tailwind,Ant Design
- Redux, Zustand

Database

- MySQL, MSSQL,Postgres, MongoDB

Tools

- Git, Docker ,linux
- Problem-Solving

WORK EXPERIENCE

Thuriya Ace Technology Co., Ltd.

- Internship & On-the-Job Training | Jun 2024 – Sep 2024
- Software Developer Junior Level | Oct 2024 – Jun 2025
- Software Developer Mid Level | July 2025 – Present

EDUCATION

UNIVERSITY

- Dagon University B.A.
- Myanmar Major Expected
- Graduation: 2027

PERSONAL ATTRIBUTE

- Strong problem-solving skills and attention to detail
- Eager to learn new technologies and frameworks
- Able to work both independently and as part of a team

IMPLEMENTED PROJECTS

1.Life Claim

- Enables policyholders to initiate claims based on key factors such as coverage limits, policy exclusions, and claim history.
- Automates claim evaluation by assessing predefined criteria to determine eligibility and payout calculations.
- Enhances fraud detection and risk assessment through integration with external data sources and analytics.
- Supports multi-step claim approvals, reducing manual effort and improving turnaround time.

2.Payment Gateway

- Third-Party Bank & E-Payment Integrations: Connected with multiple banks and e-payment providers, supporting various payment methods such as QR, digital wallets.
- Developed a real-time transaction monitoring dashboard used by operations teams to track payment statuses and reduce reconciliation effort.
- Generated daily and monthly financial reports for reconciliation and auditing.
- Enabled QR-based or wallets payments for faster and more convenient transactions.
- Implemented callback mechanisms to notify users and administrators when transactions fail.

3.Bill Management

- Enabled both individual invoice entry and bulk invoice uploads via Excel for efficient data handling.
- Implemented a confirmation step to validate and review invoice data before allowing payment processing.
- Real-time monitoring of invoice statuses, payment progress, and system activities and Generated detailed invoice, payment, and transaction reports to support financial reconciliation and auditing.
- Developed a powerful enquiry feature allowing users to search, filter, and track invoices using various parameters like invoice number, customer, and date.
- Integrated with a third-party payment gateway portal to enable seamless invoice payments using multiple payment methods.

4.Agent Portal

- Integrated real-time data streaming with Kafka to consume policies, agents, claims, commissions, and premium calculator data. Structured the data in JSON format and persisted it into both MongoDB and MySQL for efficient storage and querying.
- Developed a web-based administration portal for insurance companies to manage agent subscriptions, set subscription limits per company, and create agents directly within their organization.
- Implemented push notification functionality to deliver real-time updates and messages to agents across web and mobile platforms.
- Enabled agents to view their performance metrics, including policy sales, renewal policy ,commissions, and submitted claims, supporting business analysis. Also provided features for premium calculation, product information, and scheduling customer appointments.

5. FRD System

- Enabled Excel data upload for each branch and cooperate with validation and duplicate prevention.
- Built an automated comparison module to identify changes between two months .
- Implemented role-based administration allowing control over users, roles, menus, branches, and cooperates.
- Created a data enquiry module for searching and exporting results (Excel/PDF).

6. Administration Third-Party Portal

- Developed a portal to manage multiple merchants with role-based access control; admin can manage merchants and their users.
- Enabled merchants to view customer orders and approve/reject them; approved orders allow customers to make payments.
- Integrated backend processes to update and synchronize data with Customer API and Core API.
- Implemented certificate generation for customers upon successful payment.
- Designed cross-system order flow: orders placed on merchant websites, approved by merchants, and processed in the core system.

7. Omada

- Worked on an enterprise hierarchical management system for multi-level organizations.
- Supported geographic, departmental, and positional organizational structures.
- Implemented role-based user management and task workflows.
- Supported task creation, assignment, distribution, and status tracking.
- Supported document generation using templates.
- Supported multi-language content and organization-scoped visibility.

8. Info Desk

- Worked on a Management Information System for the insurance industry.
- Consolidated operational information from General, Life, Medical, and TPL insurance systems.
- Supported management visibility across payment, underwriting, claims, portfolio, and sales information.
- Implemented access control based on user responsibilities, departments, and branches.
- Supported administration of users, roles, permissions, branches, and financial years.
- Supported both Myanmar and English interfaces.
